

MiniPro RAID V3

Firmware update for TRIM and high capacity RAID 1 rebuild. (Jan 2017)

1. Connect a MiniPro RAID V3 to a Windows computer. Disconnect all other external hard drives.
2. Download the firmware update tool: http://oyendigital.com/tech/firmware/MiniPro_V3_Update_Jan17.zip
3. Right-click on the zip file and select 'Extract All.'
4. Double-click the file: 'MiniProV3_135xFWUp3013_161202B52008_V1.exe'. (If Windows blocks it, select More Info > Run Anyway)

5. The firmware update will automatically process.
6. After completed, it will show the following:

7. Cycle the power on the MiniPro RAID V3. The firmware is now updated.
